

# INSTALLATION OF THE WSL-APP

## Quick-Start-Guide

Please allow approximately 5-10 minutes for setup.  
A stable internet connection is required to set up the WSL app.

Navigate to your app store or Google Play and install the **„Würth Secure Logon“** app on your mobile device.

For Apple devices, you may need the app store login information.  
You only need to install the WSL app on one device. With this you approve accesses from other end devices.

Open the WSL app. The following permission queries can be requested during the installation process:

- Send messages (is required)

Click the camera icon and scan the QR code from the email **„token registration“**. When prompted, allow the app to access the camera and data. Enter the registration PIN from the e-mail **„Token registration PIN“**.

If the entry „WSL-Secure Logon“ is displayed in the app, the token setup was successful.

Open the e-mail **„Password Reset“**, click on the link and assign a personal WSL password in the input mask.

The link is valid for 1 week and can only be opened once!  
Remember this password well. This password will be needed later to access our systems.

**The installation process is now complete. Your WSL app is now ready to use.**
